

PREVENTING WHEELCHAIR FALLS IS EASIER THAN YOU THINK

PROACTIVE WHEELCHAIR SAFETY

Most wheelchair falls occur simply because the manual wheel locks are not used while transferring to and from the wheelchair, causing the chair to roll away while sitting or standing.

Safer Locks are **AUTOMATIC**; locking the wheels as soon as the user stands, then unlocking the wheels as soon as the user is safely seated back in the chair.

Even when manual wheel locks are not used, Safer Locks will always engage, locking the wheels. Our proactive approach can prevent unnecessary falls and injuries from ever occurring.

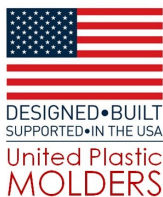

- ✓ **AUTOMATIC** Ideal for those with Alzheimer's, dementia, or other memory impairments
- ✓ **NORMAL OPERATION** Wheelchair continues to roll in both directions as normal with user safely seated
- ✓ **HUB LOCKING** No exposed parts that can be damaged and no premature wear on wheels
- ✓ **DUAL PADDLE DESIGN** Comfortable: Two lightweight springs so Paddles are not felt by the user
- ✓ **POSITIVE LOCKING** Wheels locked from rolling forward and backward when engaged
- ✓ **FOLDING** Wheelchair continues to fold as normal with Safer Locks
- ✓ **SAFER TRANSFERS** An empty wheelchair is always a locked wheelchair
- ✓ **OVERRIDE HANDLES** Allow caregivers to roll the wheelchair when unoccupied
- ✓ **MAINTENANCE FREE** No additional adjustments, maintenance, or service required
- ✓ **WARRANTY** Unmatched Full TWO-YEAR Warranty from time of purchase
- ✓ **PEACE OF MIND** No more worries that a loved one will fall simply due to unlocked wheels
